About the Tutorial

Windows 10 is the latest OS version from Microsoft. This tutorial gives you all the in-depth information on this new operating system and its procedures, right from what all hardware and other system components are required to install this OS in your system, to its advanced features and other uses.

Windows 10 combines the features from its two previous versions for making it further user friendly for desktops as well as laptops and mobile devices. This is an introductory tutorial that explains all the fundamentals of Windows 10.

Audience

This tutorial has been designed for all those readers who want to learn the features of Windows 10. It is especially going to be useful for all those professionals who are required to install and use this operating system to perform various duties in their respective organizations.

Prerequisites

We assume the readers of this tutorial have a practical experience of handling a Windows based Laptop or Desktop. In addition, it is going to help if the readers have a basic knowledge of how to install and use an operating system.

Windows 10 is the most recent version of the operating system from Microsoft. Officially it was released in 2015 and was initially offered free of charge to legitimate users of Windows 7 and Windows 8.1. This new version combines features from those two previous installments to suit the users in a better way for both desktop/laptop computers as well as mobile devices.

The most notable change in Windows 10 is that Microsoft replaced the Start screen tiles from Windows 8, and brought back the Start Menu. They also removed the vertical toolbars (or "charms") that appeared from the sides of the screen. These changes make this Windows version easier to use for users of both desktop/laptops and mobile devices.
There are two approaches you can take for installing Windows 10 in your computer: Upgrade or a Clean Install.

Typically, when you upgrade your operating system, all your documents and applications remain unchanged, whereas with a clean install you would be starting again from scratch. But one important thing to verify first is if your computer has the necessary hardware to support Windows 10.

**System Requirements**

Although most computers nowadays probably have the necessary requirements for Windows 10. It will certainly be useful to know them in case you want to upgrade from an older system.

The main requirements are:

- A processor (CPU) with a clock rate of at least 1GHz.
- At least 1 to 2GB of memory (RAM), but Microsoft recommends 4GB.
- At least 16GB space in your hard disk.

One important thing to note is that the installation process itself will verify your computer hardware and let you know if it qualifies for a Windows 10 upgrade or not. If not, then you will need to upgrade your hardware.

**Upgrade**

If your computer qualifies for a Windows 10 upgrade, then you can follow these steps to perform the upgrade:

**Step 1:** Look for the Windows 10 notification in the lower-right corner of the screen. This is a one-year-only offer that Microsoft is extending to valid users of Windows 7 and Windows 8.1.
Step 2: By clicking on the notification, it will start the download and installation process of Windows 10 in your system.

The download required for the upgrade is quite large, so make sure you have a stable Internet connection and continuous power for your computer to avoid interruptions during the process.
**Step 3:** After the download is complete, it will prompt you to accept Microsoft’s license terms.

![Windows Update](image)

**Step 4:** After agreeing to the terms, it will ask if you want to install the upgrade at that moment or schedule it for later.

![Windows Upgrade](image)
Since the upgrade process can take approximately 2 hours, it will be helpful to schedule it for a time, that will be more suitable to you.

**Step 5:** Once the upgrade starts, the system will perform a series of tasks, during which you will see the following screen.

During this time, your computer will reboot a couple of times, so don’t worry. The process itself will take you through the steps to complete the upgrade.
Step 6: As the upgrade approaches its end, it will ask you to configure some basic Windows settings. You can choose to use Express settings, which will apply the most common or recommended settings, or you can choose to customize the settings as you please.

![Express settings settings](image)

Step 7: After the upgrade finishes, you’ll see the Windows welcome screen.

**Clean Install**

If your computer has an older operating system like Windows XP or Vista, you won’t be able to upgrade for free. In these cases, you’ll need to buy a boxed copy of Windows 10 to have a valid license for the installation. Windows 10 will have a starting price of $119.
